

Vaccinations

Kittens & Cats

- Rabies is a fatal infection of the nervous system that attacks all warm blooded animals including humans. It is a public health hazard and a risk to all pet owners. There is no cure for Rabies. Vaccination is your pet's only protection.
- Feline Respiratory Disease (Rhinothacheitis, Calici, Chlamydia) are highly contagious and widespread. These diseases are easily spread from cat to cat. Even a cat that seems healthy can infect your pet. Chances are high that your cat will be exposed. Vaccination is your pet's only protection.
- Feline Panleukopenia, also known as distemper, is highly contagious, easily transmitted from cat to cat, and can be fatal. Nine out of ten cats with distemper may die. Symptoms include depression, loss of appetite, fever, vomiting and diarrhea.
- Feline Leukemia (FeLV) / Feline Immunodeficiency Virus (FIV) is incurable, contagious from cat to cat, and usually fatal. The FeLV/FIV virus severely suppresses the immune system so the cat's body cannot fight off diseases. Symptoms include weight loss, weakness, loss of appetite, diarrhea, and fever. There is no successful treatment, but testing may be necessary.
- Annual vaccinations help protect your cat.

Puppies & Dogs

- Rabies is a fatal infection of the nervous system that attacks all warm blooded animals including humans. It is a public health hazard and a risk to all pet owners. There is no cure for Rabies. Vaccination is your pet's only protection.
- DAP (Distemper, Adenovirus, Parainfluenza) are widespread, contagious, and deadly. Nearly every dog will be exposed during its lifetime making vaccination a must.
- Parovirus & Coronavirus are intestinal infections resulting in viral diarrhea, fever, vomiting and depression. Transmitted through direct contact with and infected dog's feces and urine, both are highly contagious and life-threatening.
- Kennel Cough or Tracheobronchitis, is an upper respiratory infection causing a persistent, dry hacking cough. The disease may last several weeks and is highly contagious.
- Heartworm is a life-threatening disease wherever mosquitoes are present. Your pet must be tested prior to starting on preventative medication. Using and OTC preventative medication in an infected dog could result in death. Annual testing is recommended even in year-round use of medication.
- Annual vaccinations can help protect your dog.
